TIPS

Glossary of terms

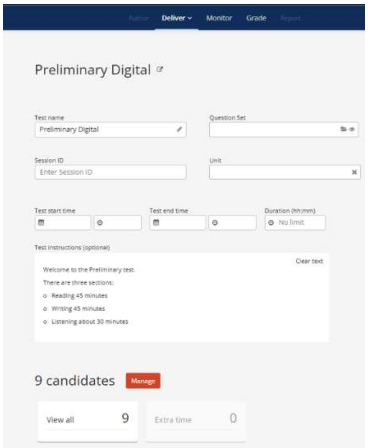

Inspera Integrity Browser (IIB): IIB is the test platform installed on candidates 'devices.

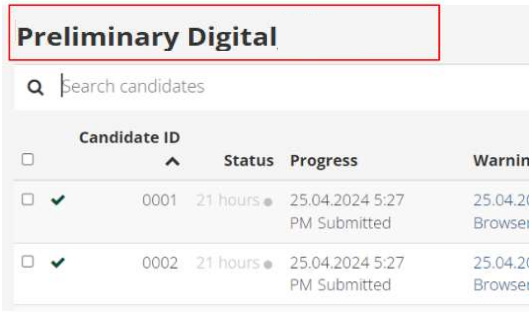

Inspera Admin Portal (IAP): IAP is the portal used by invigilators to monitor candidates. Invigilators will access IAP via My Cambridge.

Parent test: In Inspera, a Parent test is the equivalent to an exam, e.g First Digital. Within the Parent test, you can:

- print candidate logins
- see the Invigilator password
- access the Child tests

Candidates should not be monitored from the parent test. The only actions you should do at the Parent test are listed above. If you try to monitor candidates by clicking on *view all* and the name of the exam appears at the top, close down that tab. Do not pause candidates or add extra time in Parent test. Follow the steps in page 4 to manage candidates effectively.

Child test: In Inspera, a Child test is the equivalent to a component e.g. Reading. When you click on the relevant Child test, the name of the Child test will be at the top of the dashboard.

Within the Child test, you can:

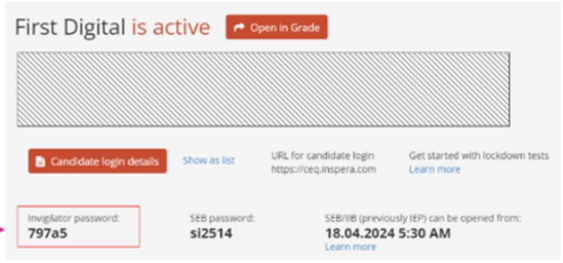

- pause candidates
- add extra time
- rewind audio in Listening Child test

Follow the steps on page 4 to manage candidates effectively.

Invigilator passwords

The invigilator password can be found in the Parent test.

Invigilator password

Invigilator passwords can be used to:

- Exit Inspera Integrity Browser
- Transferring candidates to a different computer

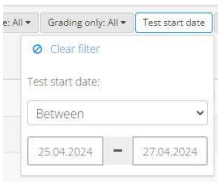

Test window

Tests must start and finish within a 24-hour window of your local time, midnight to midnight. If you need to administer earlier or later than the scheduled time, you can do it without approval, as long as the exam finishes within the 24-hour window.

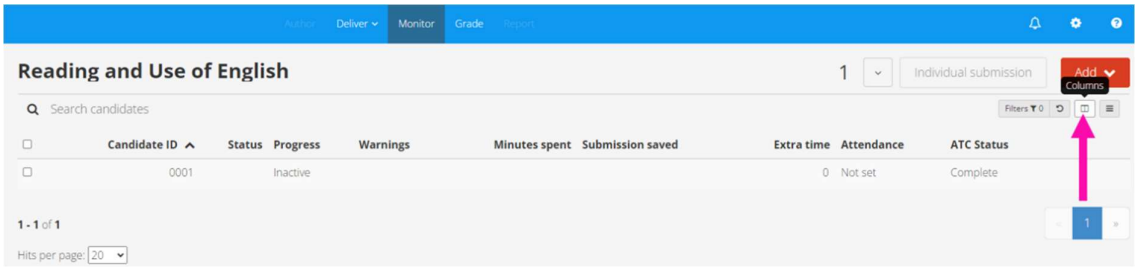

Filters and views

Navigate to the filter options located at the top of the Inspera window to find the Parent test by choosing *Test start time* and selecting *Between* then selecting a date range from the day before to the day after the test.

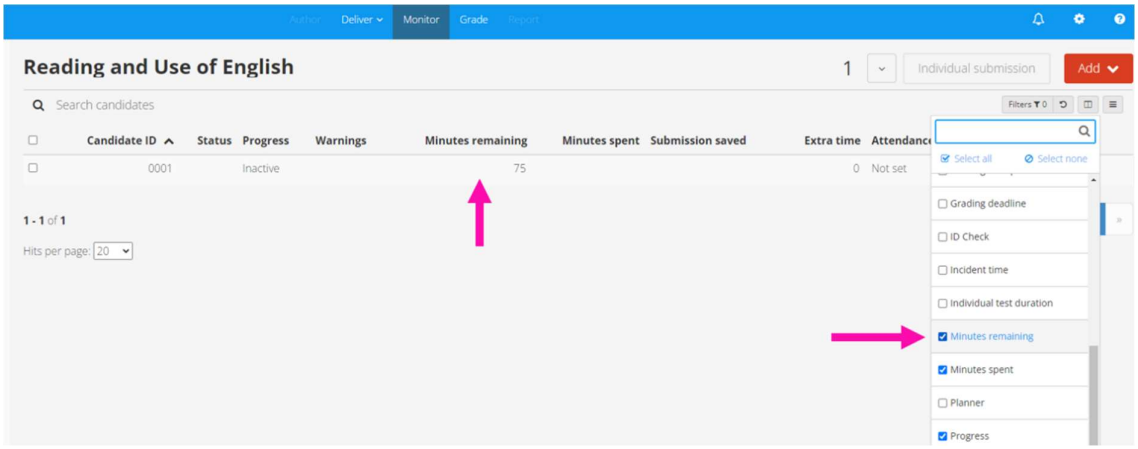

You can add more columns to the selected view. Follow the steps on page 4 to open Child tests. Once you are monitoring the Child test, click on the column icon.

One of the useful columns to add is *Minutes remaining.* This option provides real-time information on candidates' remaining time, helping invigilators monitor the test.

Preparing for candidates

You should run Inspera Integrity Browser and run the system checks before candidates enter the test room to allow you enough time to resolve any potential technical issues. When candidates are seated, they should see the login screen.

Child tests order

Candidates must take the Child tests in the agreed order. It is not possible to do it in a different order.

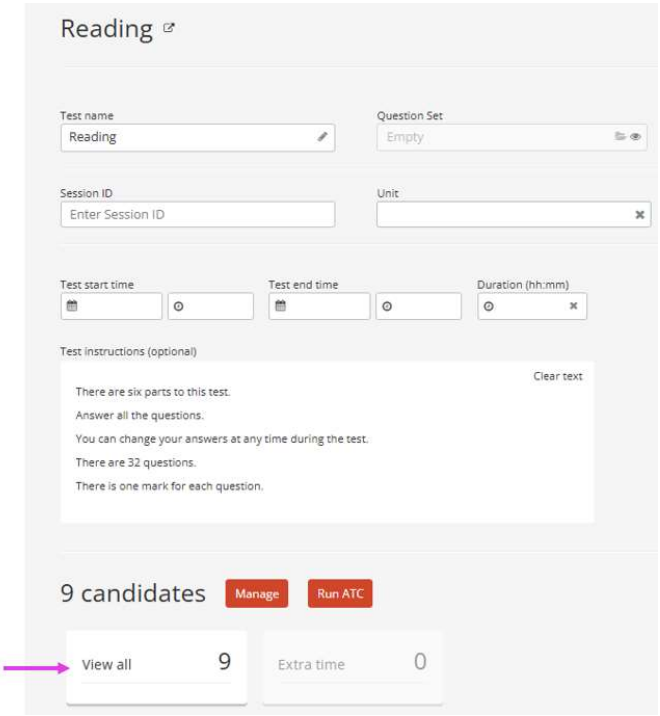

Managing candidates' tests on Inspera Admin Portal

When managing candidates' tests (for example pausing tests, rewinding Listening tests or adding extra time), you need to do it in the relevant **Child test**. You will only be able to take actions when candidates are *In progress*, which means they have started the Child test and it has not ended.

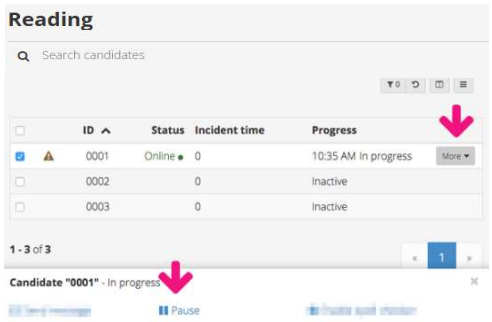

- Find your test event in the Deliver tab of Inspera Admin Portal. Click on the name of the exam to open the Parent test.
- Scroll down and open the relevant Child test (for example, Reading).

- Click on *View all* candidates.

- A new Monitor tab will open. Select the relevant candidate(s) and the appropriate action (e.g. pausing, adding extra time) from the menu at the bottom.

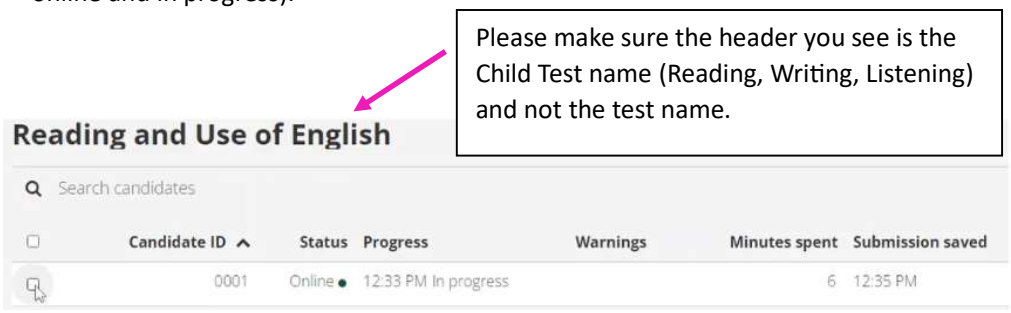

Ending a Child Test early

It is now possible to end a child test (component) before the allotted time runs out using the **Edit End Time** option.

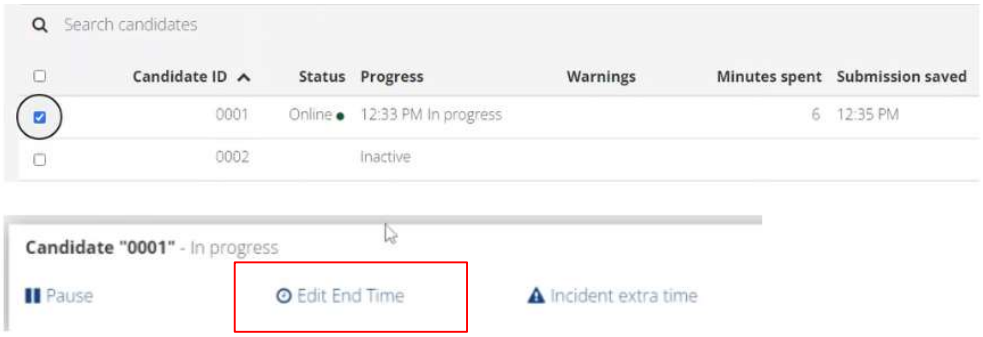

> Warning: Once a candidate is submitted, this cannot be undone. Please make sure you are selecting the correct candidate and that they are ready for the child test to be ended.

To end the child test early, you will need to select the candidate or candidates in the monitor tab for the **child test**.

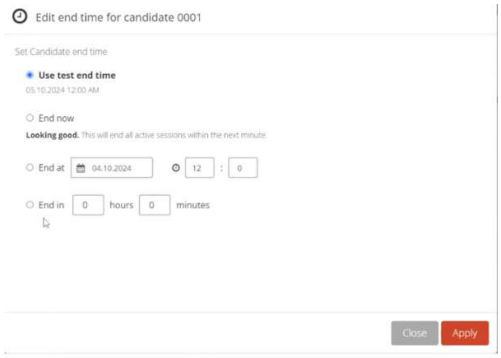

1. Select the candidate or candidates that you wish to end the test for (Candidate must be online and in progress).

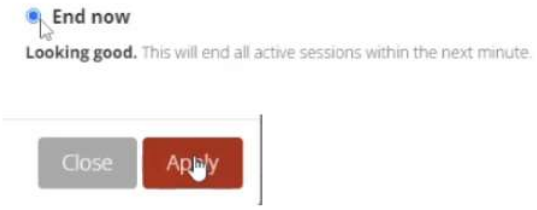

2. The options menu will now appear at the bottom of the screen. Select the 'Edit End Time' option as shown below:

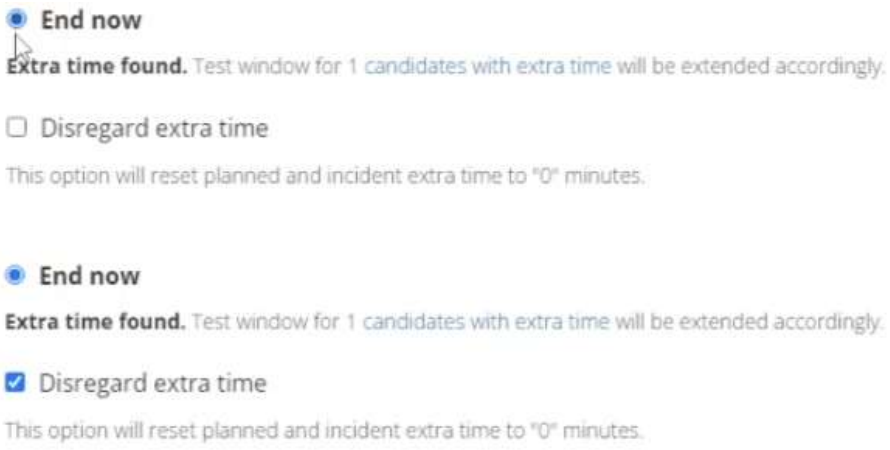

This will open a new popup menu that gives you four options to change the end time for the candidate or candidates:

3. To end the test for the candidate or candidates, select the 'End Now' option and click the 'Apply' button:

Note: for candidates with Extra time (either planned or incident), when you select 'End Now' a second option will appear called 'Disregard extra time'. Select this option and then click the apply button.

Once 'Apply' is clicked, the end now command is sent to the candidate's device and the candidates child test (component) is submitted, the candidate is returned to the candidate dashboard and can now proceed to the next child test (component) or scheduled break.

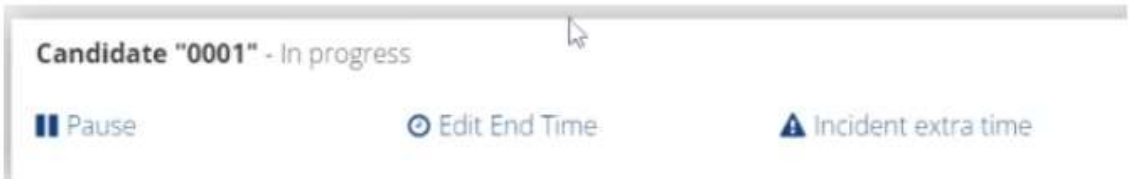

What to do if you have ended the test at parent level by mistake?

If you have ended the test for the candidate at the parent test level by mistake, it is possible to fix this.

1. At the parent test level, in the monitor tab, select the candidate:

2. From the menu, select Edit End time:

3. When the Edit End Time pop up opens, select the Use test end time option:

4. Click apply:

This will apply the test end time to the candidate at the parent level and the candidate will be able to continue their test.

Rewinding in Listening test

If you need to rewind the Listening test due to an incident, note that it is a **two-step** process. First, select the *Rewind audio* function in the Child test for all affected candidates. Enter the number of minutes that corresponds to the duration of the incident. Then, add the same amount of time to extend the test by using *Incident extra time*. With both functions, you need to complete *Incident report* by selecting the most appropriate reason.

Contacting Customer Support

If you need to contact us on the test day, use the below phone number and provide the Test ID number that is at the end of the URL of the Parent test in the Inspera Admin Portal.

Test day number **+44 (0) 1223 803 786**

TROUBLESHOOTING

Responses are not submitted

If responses are not submitted after each Child test ends, contact Application Support on the test day at +44 (0) 1223 803 786.

Candidates are unable to log in

1. Ensure candidates type their logins correctly.
2. Reprint candidate login details as the centre may have made changes to entries. You can do this by using the *Candidate login details* button in the Parent test:

3. If the candidate logins still do not work, check the logins by opening this site https://ceq.inspera.com/student.

   Enter the candidate's logins. If they are accepted, they are correct, and the issue is with the version of IIB installed on the candidate's computer. If your centre also runs IELTS the computer will have two IIB shortcuts installed, one for CEQs and another for IELTS. Please make sure you are opening IIB CEQ.

If your centre only runs CEQ, check that you are using the latest version of IIB. You should uninstall IIB from the candidate's computer and install the latest version from this site: https://ceq.inspera.com/get-iep

Candidates missing in test event

If one or more candidates are missing from the test event in Inspera Admin Portal, it could be due to several reasons:

Scenario 1: Candidates are in a different test event

Test events in Inspera are created according to groups and packing codes in CECP. Occasionally, candidates in the same booking might be assigned to different groups or packing codes.

1. Open Inspera Admin Portal and find all test events for the desired day. If the missing candidates are in a different group or packing code in CECP, you will find them on the test event created for that specific group.

In conclusion, in this scenario, you will need to monitor candidates under multiple test events.

Scenario 2: Entries saved but not confirmed

Occasionally, entries in CECP might appear as saved but not confirmed. Only when entries are confirmed in CECP, a test event will be created in Inspera Admin Portal.

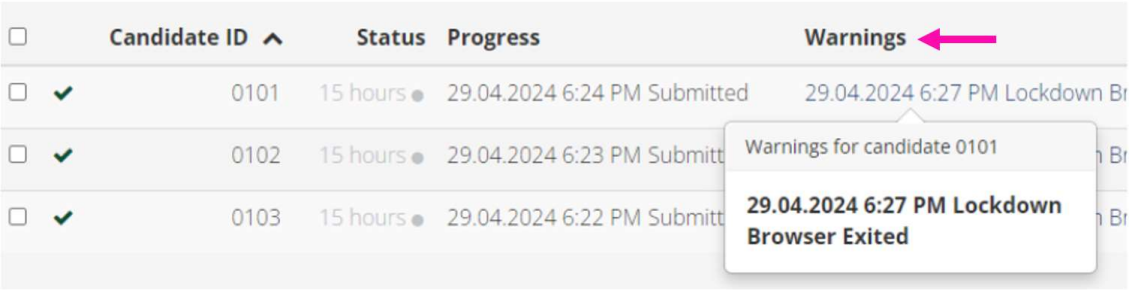

1. If you are checking your test event before the Entry Closing Date (ECD), please confirm all entries in CECP.
2. If entries have not been confirmed before ECD, you will need to reschedule your test as we cannot make any late entries.

Scenario 3: All candidates are in the same group and entries are confirmed in CECP

If all entries are confirmed in CECP and are assigned to the same group and packing code, and you still have missing candidates in Inspera, please contact Application Support.

Warning messages in the Inspera Administration Portal (IAP)

IAP may display messages in the *Warnings* column for candidates as they progress through the test.

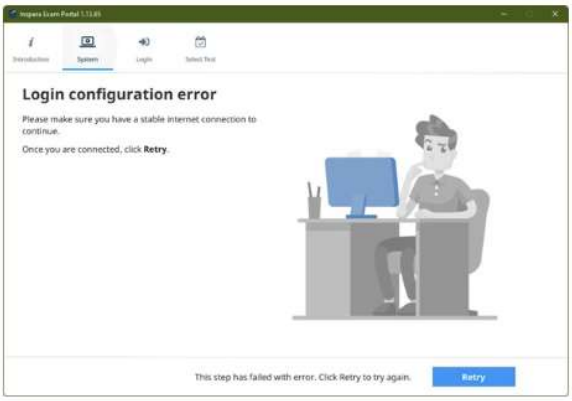

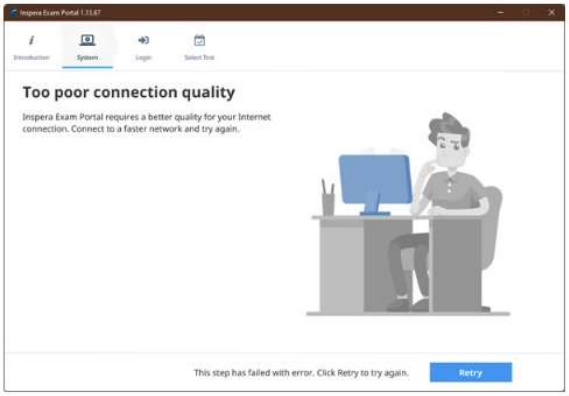

Find below the list of messages that can appear:

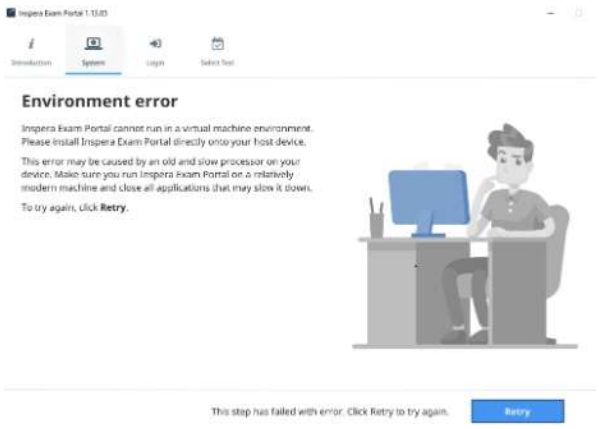

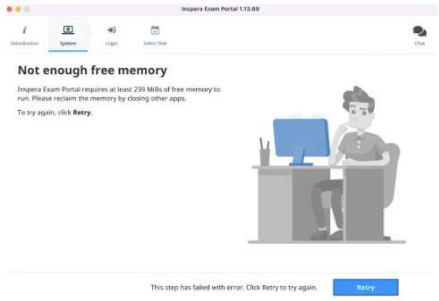

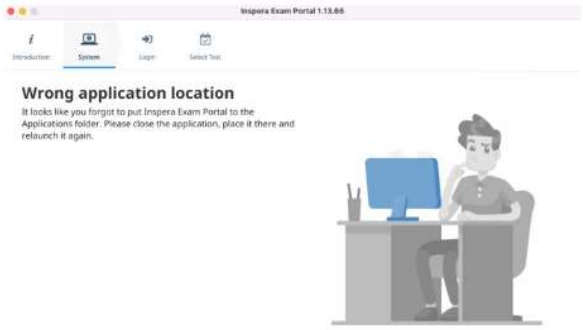

Warning	Explanation	Candidate message
Lockdown Browser Exited	If you see this message prior to the start of the test, you may need to restart Inspera Integrity Browser (IIB)	Lockdown Browser Exited. The candidate exited IIB without submitting responses.
Lockdown Browser Error	An error with IIB caused the application to end. The candidate may be able to resume their test.	An error with IIB caused the application to end.
Test exited - Secondary monitor attached	Triggered if a candidate attaches another monitor during the test.	The test has closed because IIB has detected the attachment of another monitor.
Test exited - Connection Failed	Triggered if a candidate experiences prolonged internet outage or the connection is poor quality.	The test has closed due to poor internet connectivity.
Test exited - User switched off	Triggered if Windows device is put into hibernation state by closing the lid of the laptop.	The test has closed because IIB has detected that the candidate logged off the user account.

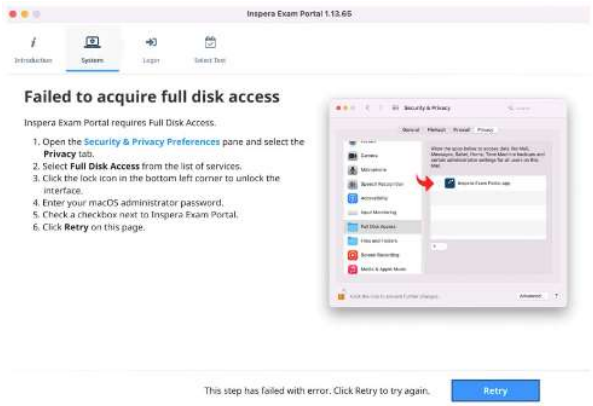

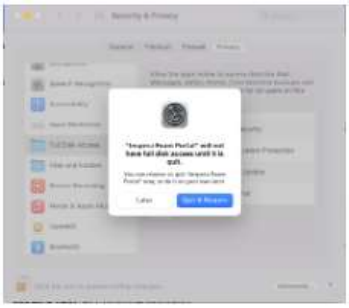

Test exited – Failed to close prohibited proce sses	Triggered if prohibited software is running that IIB cannot close automatically.	The test has closed because IIB has failed to close running prohibited processes.
Test exited - Windows Desktop switched		The test has closed because IIB has detected that the active desktop has changed.
Test exited - Screenshot activated	The MacOS Screenshot function was activated.	Mac computers only: The test has closed because the MacOS Screenshot function was activated.
Test exited - Remote session detected	Windows Remote Desktop Connection was detected during the test.	The test has closed because IIB has detected a remote session in progress.
Test exited - Lockdown Browser lost focus	The candidate has switched applications.	The test has closed because a candidate opened another application. IIB does not allow the use of third-party applications.
Test exited - Unknown Lockdown Browser error	The Lockdown Browser crashed. The test ended.	An error has occurred. Restart the IIB Exam Portal and log back into your test.

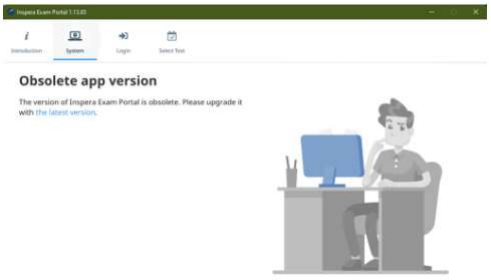

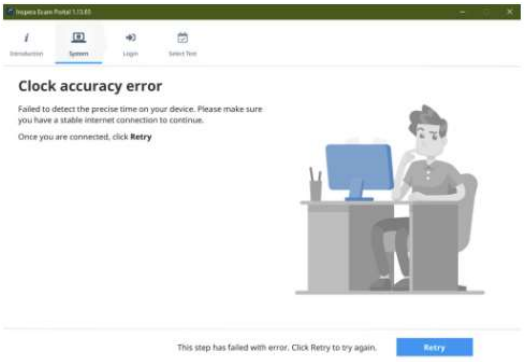

Error messages when launching Inspera Integrity Browser on candidate' devices

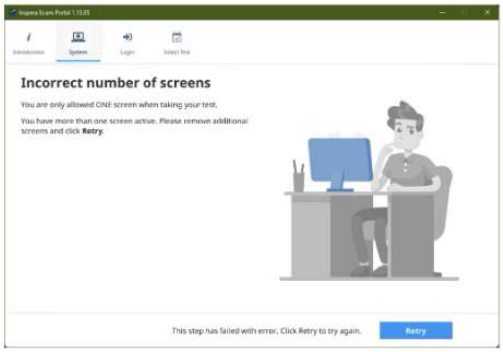

When open IIB for the first time, it will perform several system checks. If any of these checks fail, you may see one of the listed errors.

Login configuration error	Troubleshooting
	• A proxy server could be blocking access to IIB from your venue. Try changing networks if possible. • Ensure you are online and connected to the internet. • Consult with your local IT Team if this message persists.
Too poor connection quality	**Troubleshooting**
	You may have an internet connection, but the quality is currently very poor. • Click **Retry** as it may have been a temporary issue. • If the same message appears, close and open the software. Otherwise, you may need to change networks.

Environment error	Troubleshooting
	• Make sure you are not running IIB from within an external computer e.g. a virtual PC or thin client. • Try manually closing other applications running on the device and click **Retry**.
Not enough free memory	**Troubleshooting**
	• IIB does not have enough available memory to run on the device. Close other applications and click **Retry**.
Wrong application location	**Troubleshooting**
	**This error applies to Macs only.** On Macs, this message appears when IIB is not installed and you try and open it. Try moving IIB to the application folder on the device and open. **Note**: This error occurs when launching IIB directly instead of completing the installation process. See the screenshot below for an example of the IIB app situated outside of the Applications folder: 

Failed to acquire full disk access	Troubleshooting
	**This error applies to Macs only.** When the relevant setting is enabled, this error message appears on Macs when IIB does not have the *full disk access* permission in the *Security and Privacy* settings. • Follow the instructions on screen and provide full disk access to IIB. When prompted to close IIB, choose the option *Later* not *Quit* and reopen.*2. Click the Retry button in IIB.* If this does not resolve the issue: 1. Navigate back to the settings page for full disk access. 2. Unselect and re-select IIB in the list. When prompted to close IIB, choose the option *Quit and reopen* not *Later* 3. If the check fails again, close IIB. 4. Go back to the settings and remove the access provided. 5. In the settings, provide access to IIB again. 6. Restart Mac. 7. Relaunch IIB and check if the issue is resolved. 

Obsolete app version	Troubleshooting
	If this message appears, the version of IIB used is no longer supported. • Uninstall the old version of IIB and download and install the latest version: https://ceq.inspera.com/get-iep
Clock accuracy error	Troubleshooting
	This error appears if the clock on the device and internet time server do not match. Make sure that the clock displays the correct local time. • If you have manually set the time on the device, you may need to sync the clock with a global clock server e.g. Google • Open the date and time settings on your device and synch with the Windows or Mac Servers. • Sync the device clock with a new server such as Google's NTP server: time.google.com. You may need to allow access through the firewall: NTP is on port 123 and TCP & UDP.
Unsupported CPU	Troubleshooting

	The CPU does not support the SSE4.2 instruction set which is used by IIB. Use another device.
Incorrect number of screens	Troubleshooting
	Only one monitor can be used during a test. Disconnect the second monitor and click **Retry.**
Failed to retrieve process blocklist	Troubleshooting
	This error may be caused by the local network, including a low quality or very slow internet connection. If the problem persists, contact your local IT for support.
