How to use this document

We have created this comprehensive guide to support you throughout your training. It includes all necessary resources and installation instructions. Additionally, your registration confirmation email contains links to live examination resources, as outlined below.

At the end of the guide, you'll also find a list of frequently asked questions (FAQs) and a glossary of terms to help you better understand the training content and terminology.

The training is divided into three clearly structured sections, which can be easily accessed via the table of contents:

- **Section 1**: Pre-login activities for candidates
- **Section 2**: Initiating and monitoring the test
- **Section 3**: Post-test activities

Extra Resources

Most of the resources provided are intended for the training test. However, since this training simulates the use of live examination platforms, we strongly recommend also reviewing the official live documentation. For further guidance on system functionality and common issues, please refer to the Cambridge English Qualifications Digital section on the support site.

In addition to this training user guide, your confirmation email includes the following helpful documents:

- **Digital Exam Day Booklet**
- **Test Day Tips & Troubleshooting Guide**

To ensure the best possible experience during your training session, we encourage you to make full use of all the information and documentation provided.

Training Setup Overview

This training has been designed to simulate a live test and will allow anyone who invigilates Cambridge English Qualifications Digital tests how Inspera works and how candidates can be monitored during a live session. Additionally, it will help you prepare for any potential issues that may arise during a live session.

This guide contains all the essential information you need to successfully run your training session, including installation steps.

To complete the training, we have defined two distinct roles:

- **Invigilators**, who will operate through the Inspera Admin Portal.
- **Dummy candidates**, who will use the Inspera Integrity Browser.

To simulate both roles effectively, you will need access to at least two separate devices:

- One device for installing and running the Inspera Integrity Browser (candidate view). You will need multiple devices if you are planning to monitor multiple dummy candidates at the same time.
- Another device for monitoring candidates via the Inspera Admin Portal (invigilator view).

Each component has the duration of **20 minutes**, we advise you to look over all the guides and activities before starting the test to ensure you have maximum time to complete the tasks provided.

Inspera Admin Portal for Invigilators

Please note there are some slight differences when accessing our training platforms compared to the Inspera live test portal. For example, when logging in to the live site you will login with your My Cambridge details, however this has not been set up for the invigilator training test.

The Inspera Admin Training Portal for Invigilators can be accessed via the following link:

https://ceqdemo.inspera.com/admin

You will find in our confirmation email your invigilator username. **If you are accessing our training portal for first time, you will need to create a password by using the forgotten password option.** Once you have set your password, you will be able to enter your details and click Login.

Cambridge Digital

English Qualifications

Installing Inspera Integrity Browser for dummy candidates

To login as a candidate for this training exercise, you will need to download a version of Inspera which is specifically designed for this training test. This is called Inspera Demo tenant and can be installed using the following link:

ceqdemo.inspera.com/get-iep

Please **do not** download the Inspera Demo tenant on a computer which will be used for live examinations. We advise you for this exercise to please use an alternative computer which will not be used for any live exams.

To start the installation process, follow the instructions below:

1. Right-click on the installer and select "Run as administrator".
2. The user account control popup will open, it will either ask for admin account details or ask you if you wish to continue. Follow the instructions and click "ok"
3. Once the installer launches, click "Next" on the Inspera Integrity Browser - InstallShield Wizard popup.
4. Read through the License Agreement and select " I accept the terms of the license agreement", then click "Next".
5. You are now ready to start the installation process, click "Install".
6. Once the installation is finished, click "Finish". A shortcut will appear that can be clicked on to open the software.
7. Once installed you can test that all is working by launching the software and letting the automated checks run. The sign of a successful installation is that the candidate login screen is displayed.

You can run this training and therefore submit the form, as many times as you wish. However, if you are not planning to do more training sessions in the future, we recommend you uninstall Inspera Integrity Browser (Demo tenant) once you have completed your training.

This installation process matches what will be undertaken for the live tenant, including any specifications required. For further information on these requirements please see our Inspera Integrity Browser (IIB): Minimum Requirements, Downloading and Installing guide on the support site.

English Qualifications

Training Activities

The following activities have been designed to help you familiarise yourself with the Inspera Admin Portal. While the primary focus is to simulate a live test from the Invigilator's perspective, we have also included some activities to be performed as a candidate. This will enable you to better support candidates on a test day.

We encourage you to practise the following activities as part of your training. If you are unsure how to proceed with any of the suggested activities, please refer to our **Test Day Tips & Troubleshooting** guide for detailed instructions.

Section 1: Activities to complete before dummy candidates log in

Activity 1: As an Invigilator, login to the Inspera Admin Portal (demo version) following the instructions provided on page 3 of this document.

Activity 2: Find and open your test.

Activity 3: Before dummy candidates log in, familiarise yourself with the difference between **parent test** and **child test**, this is key for monitoring your candidates during a test.

Parent test

In Inspera, a Parent test is the equivalent to an exam, e.g Proficiency Digital. Within the Parent test, you can:

- Print candidate logins
- See the Invigilator password
- Access the Child tests

Candidates should **not** be monitored from the parent test. The only actions you should do at the Parent test are listed above. If you try to monitor candidates and the name of the exam appears at the top, close that tab. **Do not pause candidates or add extra time in Parent test candidate view**. Details on how to manage candidates effectively are provided later in this document under child tests and managing candidates.

Parent test candidate view

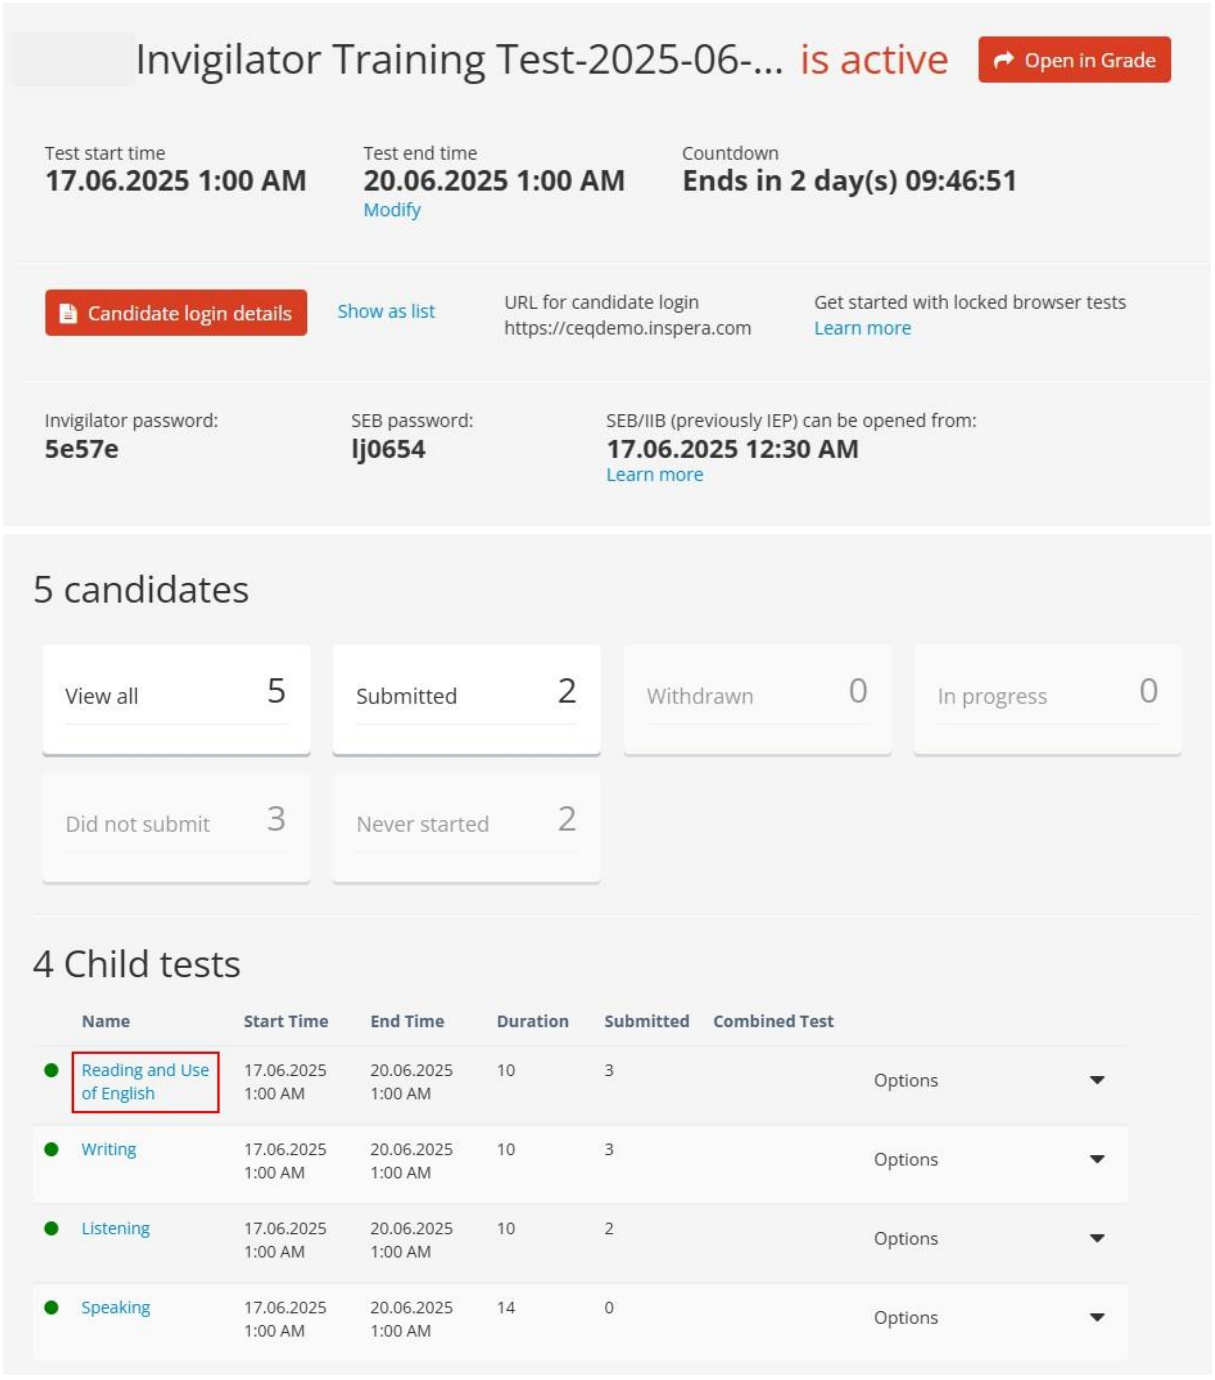

Cambridge Digital

English Qualifications

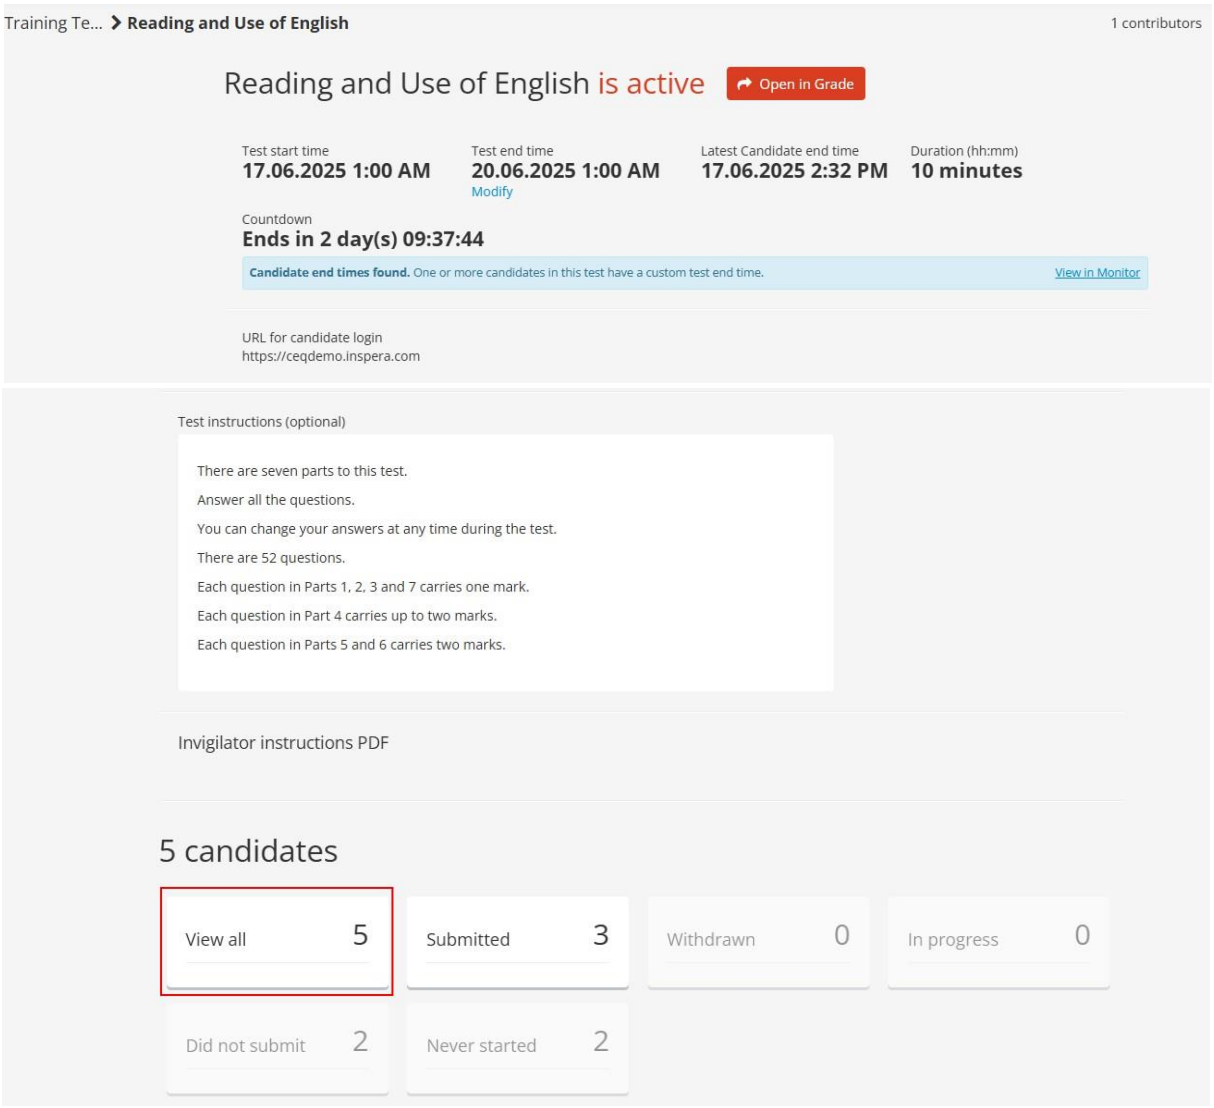

Child test

In Inspera, a Child test is the equivalent to a component e.g. Reading. To access a child test, please follow these steps:

1. Open your test.
2. Scroll down to find the relevant child test, and open it, for example Reading and Use of English.

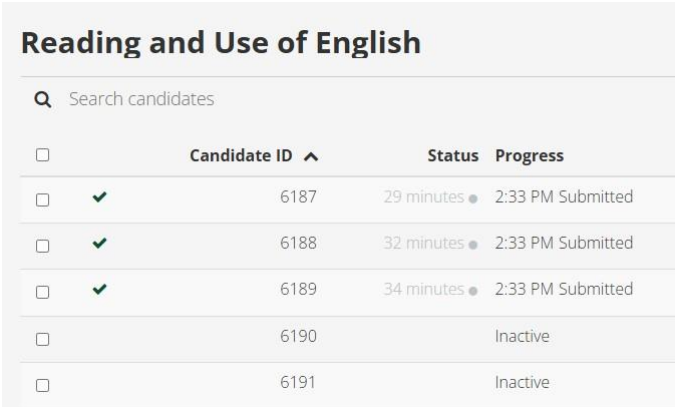

3. Click on View all.

When you click on the relevant Child test, the name of the Child test will be at the top of the monitoring page.

Child test monitoring page

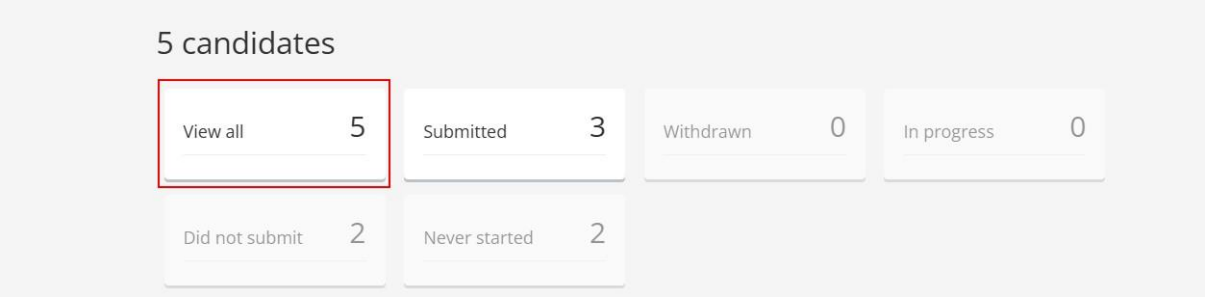

Activity 4: Print or find the candidates' login details. There are 2 ways of printing candidates login details:

The easiest one, is using the orange button you will find as soon as you open your parent test. This button is only active 1h before the test day when the test becomes active:

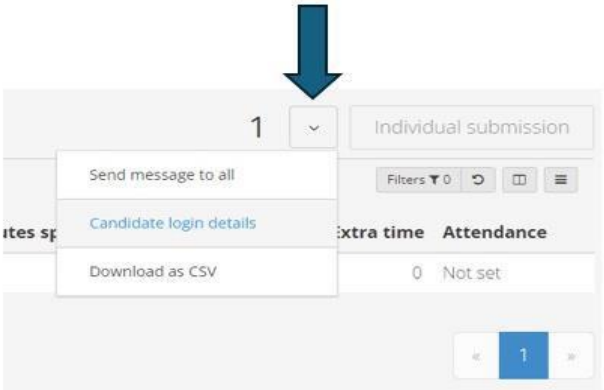

The second way of printing candidates' logins can be followed as soon as your entries are confirmed in Cambridge English Centre Portal, that means you can do it days before the test. However, if any changes are made to entries after printing login details, you will need to re-print them again. To do so, please follow these steps:

1. Navigate to your **parent test**, scroll down and select view all candidates.

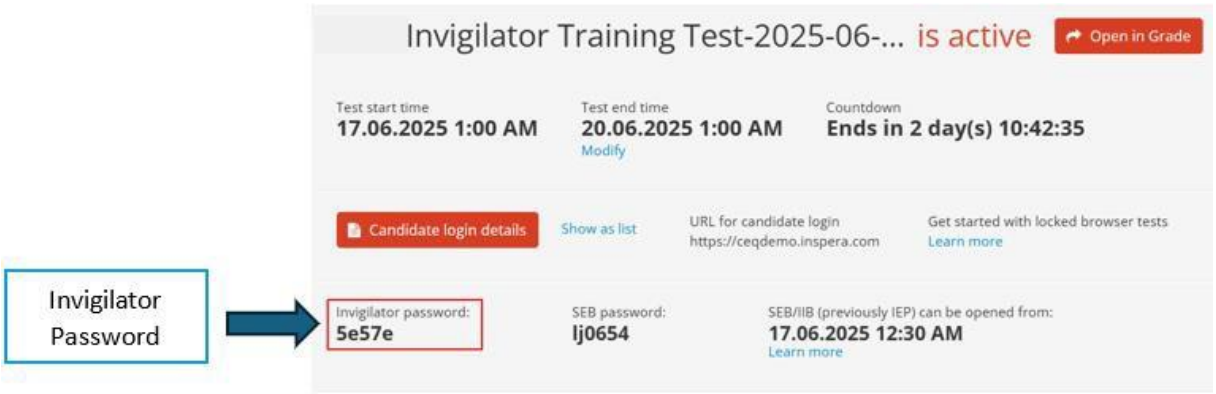

2. You will be taken to the **parent test candidate view**. Click on the drop-down in the top right of the screen, then click on Candidate login details.

Activity 5: Find the Invigilator password.

The invigilator password can be found in the **Parent test**.

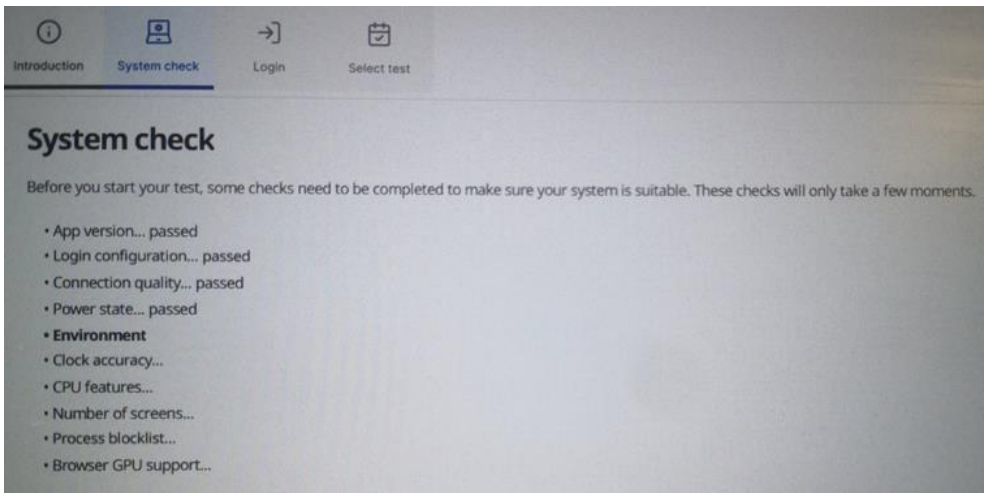

Context: The Invigilator password will be required for candidates to exit Inspera Integrity Browser before the end of the test and to transfer candidates to a different computer in the event of a technical issue.

Activity 6: Add a new filter to your views: Today's tests.

Tip: In this video you can learn more about using filters and views:

https://www.youtube.com/watch?v=9xBzmg7sN90

Activity 7: Dummy candidates can now launch Inspera Integrity Browser. Several system checks will take place; a warning will appear if there is an issue the system cannot fix, for example if a second screen is detected.

Section 2: Starting and monitoring the test

TEST DURATION

Please note that, unlike a live test, each component in the training test is limited to a duration of **20 minutes**.

Activity 8: On the candidate computer, login to the Inspera Integrity Browser (demo version) using the dummy candidate credentials you found in Activity 4.

In live tests, usernames will be a combination of the candidates last name, initial of their first name and candidate number.

After the username and password have correctly been entered, candidates will be prompted to enter the SEB pin code.

Reminder for Invigilators: Candidates need to login using the installation of Inspera Integrity Browser. Please never use the URL provided with the login details.

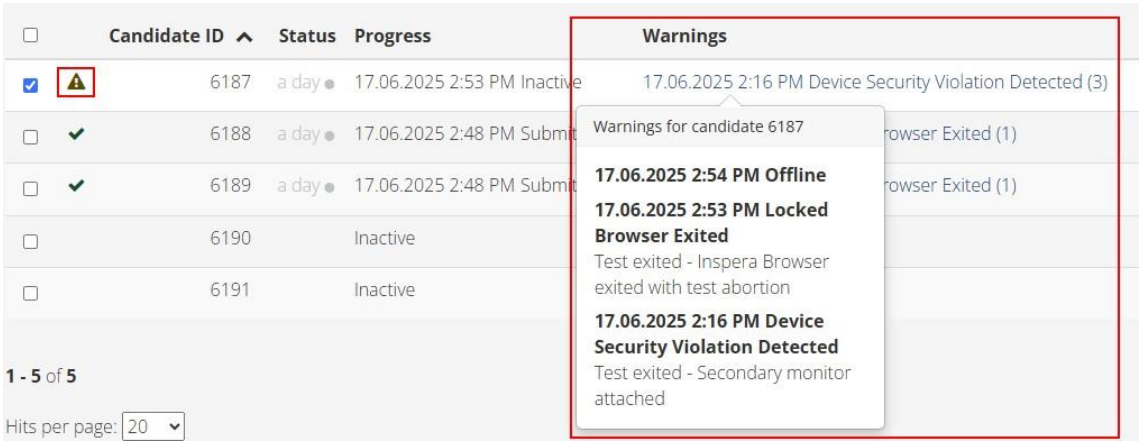

Candidates may now start the readiness check video. Once completed, start the Reading and Use of English component.

Activities during Reading and Use of English child test

Activity 9: Invigilators should start monitoring the Reading and Use of English test. Open the child test monitoring page by clicking on 'View All' under the Reading and Use of English child test.

You should check the status and progress of candidates from the moment they log in.

When monitoring, keep an eye out for any suspicious behaviour or warnings. A triangle will appear; you can also click on the item in the warnings column for further details.

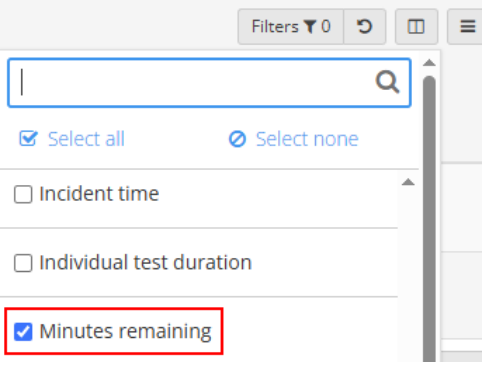

Activity 10: Invigilators should add the following column to their view: Minutes remaining.

Go to the columns icon.

Scroll down then select Minutes remaining.

Other key columns you may like to use are Incident time, Extra time and Candidate started.

Tip: Once you have added a new column to your view, you can click and drag the column to change the order as you like.

Activity 11: As a candidate, practise the following actions as explained in the readiness video:

- Taking notes
- Highlighting text
- Changing the contrast of the test
- Changing the text size

All notes are completely private to the candidates and are also only available during the test.

Please note: it is not possible to highlight and take notes on the following features within the test:

- images
- videos
- interaction elements (such as draggable options in a drag and drop interaction and prompt)
- global elements
- navigation
- answer text

Tip: Details of how to complete these steps were provided in the readiness check video.

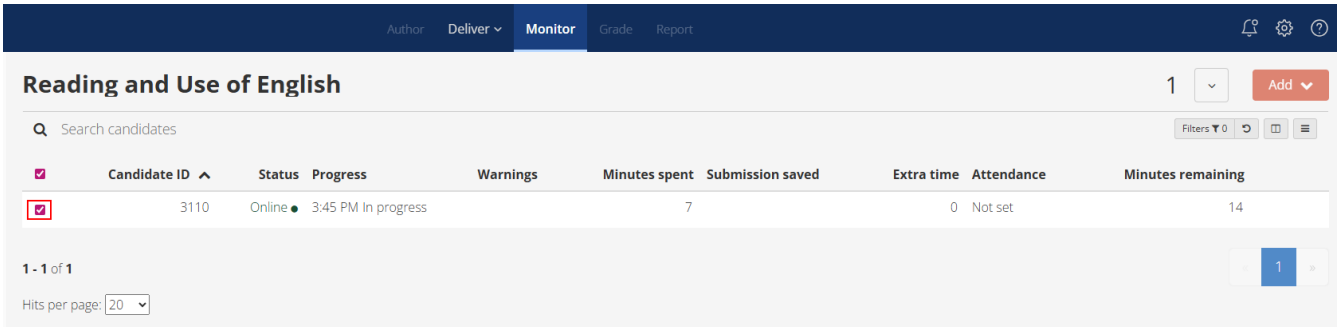

Activity 12: As the invigilator, practise the following:

- Pausing and resuming candidates

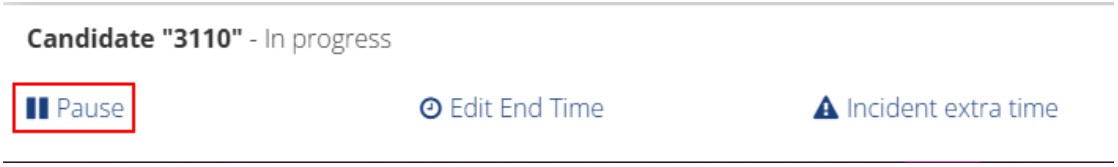

Tip: If you are monitoring more than 1 candidate, you can take this action either individually or for multiple candidates at once.

On the Child test monitoring page:

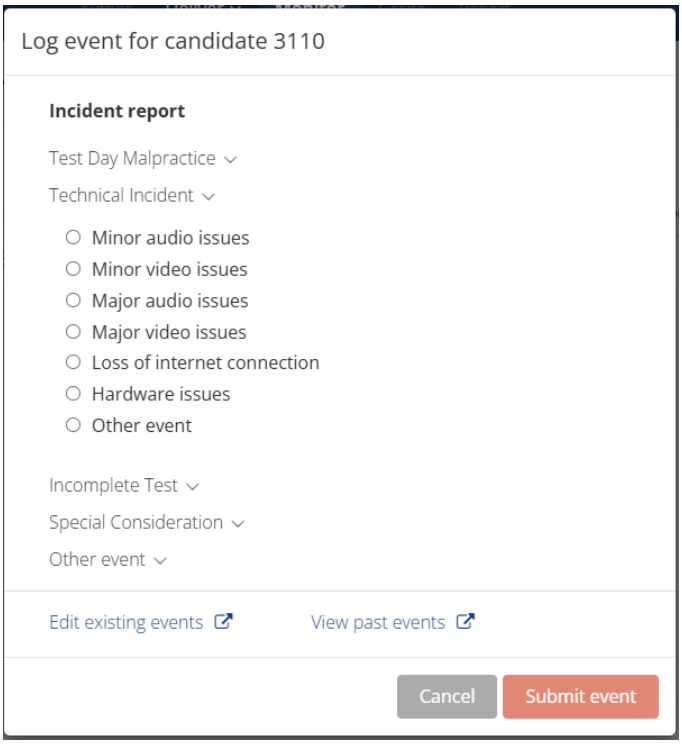

1. Select the candidate(s)

2. A pop-up bar will appear, select Pause

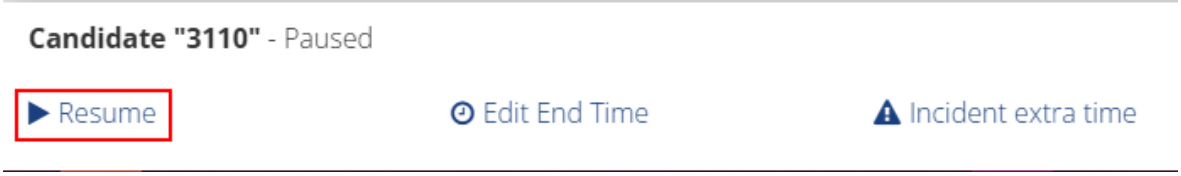

3. Another pop-up will appear, select the applicable option and click Submit event

4. The candidate(s) will see a message on their screen that the test has been paused, and you should receive a success message in the admin portal

5. Resume the candidate by again selecting the candidate, the same pop-up bar will appear, select Resume

6. The candidate(s) will be able to continue with their test

Cambridge Digital

English Qualifications

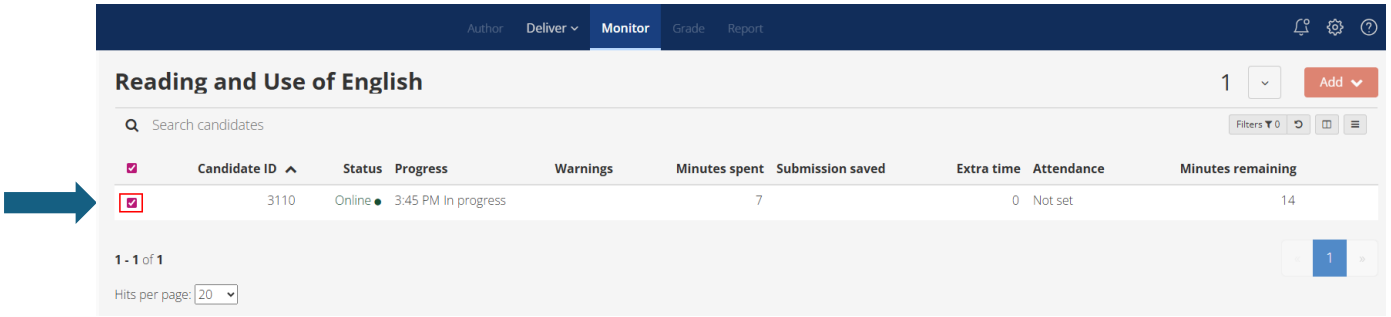

Context: During live tests you might need to pause candidates if there is any type of interruption, such as a fire alarm. You can only pause candidates if they are online and in the child component.

Activity 13: As the invigilator, practise the following:

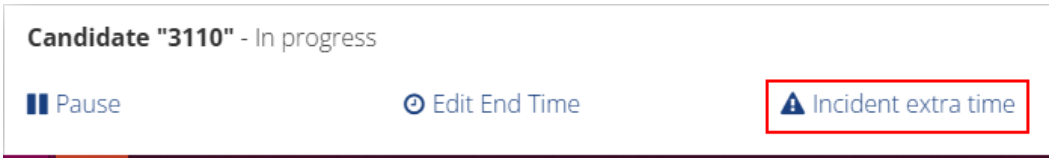

- Adding 5 minutes as incident extra time and checking what happens on the candidate computer

Tip: If you are monitoring more than 1 candidate, you can take this action either individually or for multiple candidates at once.

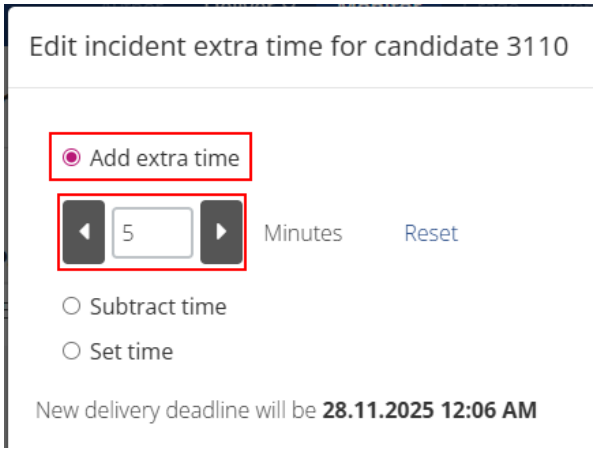

1. Select the candidate(s)

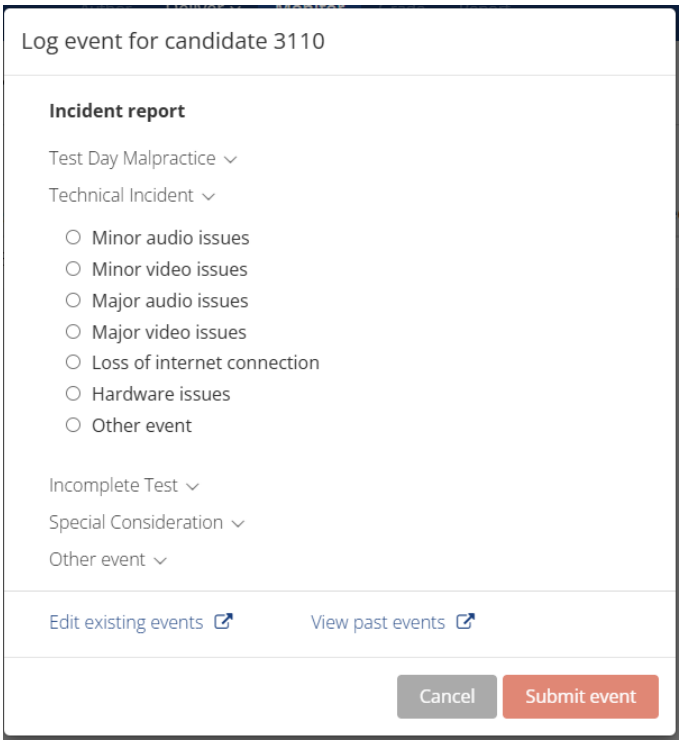

2. A pop-up bar will appear, select Incident extra time

3. Another pop-up will appear, select Add extra time and then enter the number of minuets required

4. Select the applicable reason and click update

5. Invigilators should receive a success message in the admin portal and the applicable time should be shown for the candidate(s)

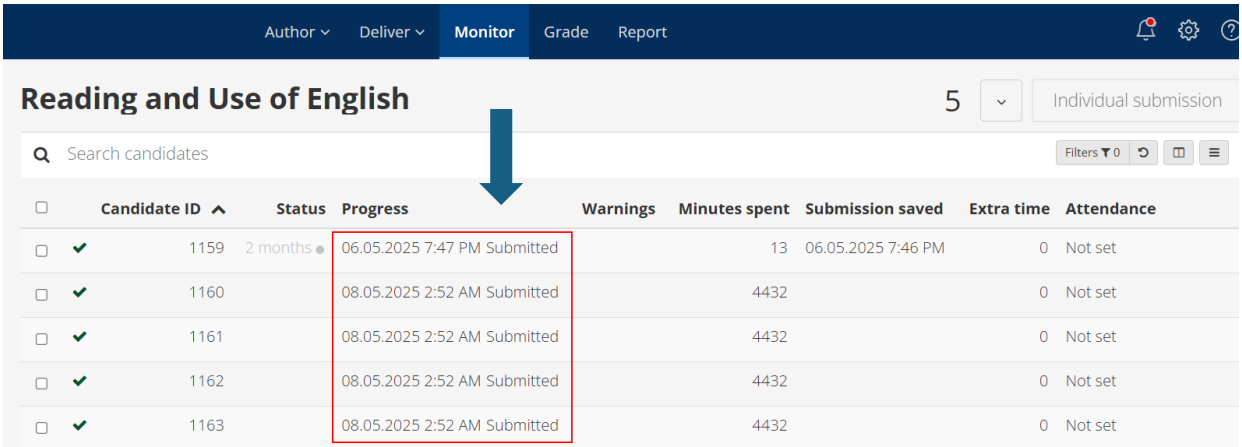

Incident extra time. Technical Incident logged for candidate 8903. View all events for candidate 8903

Incident extra time is not the same as planned extra time. A special arrangement request for extra time needs to be applied for prior to the test day and approved by our team. Special arrangements cannot be added on a test day.

Context: In the event of a power cut, candidates will go offline, and you will not be able to pause them. However, they can login on a different computer or on the same computer once the power is restored. You can then add incident extra time for the number of minutes lost during the disruption. Our Application Support team can also assist you on the day if you do not have access to your computer due to a general power cut.

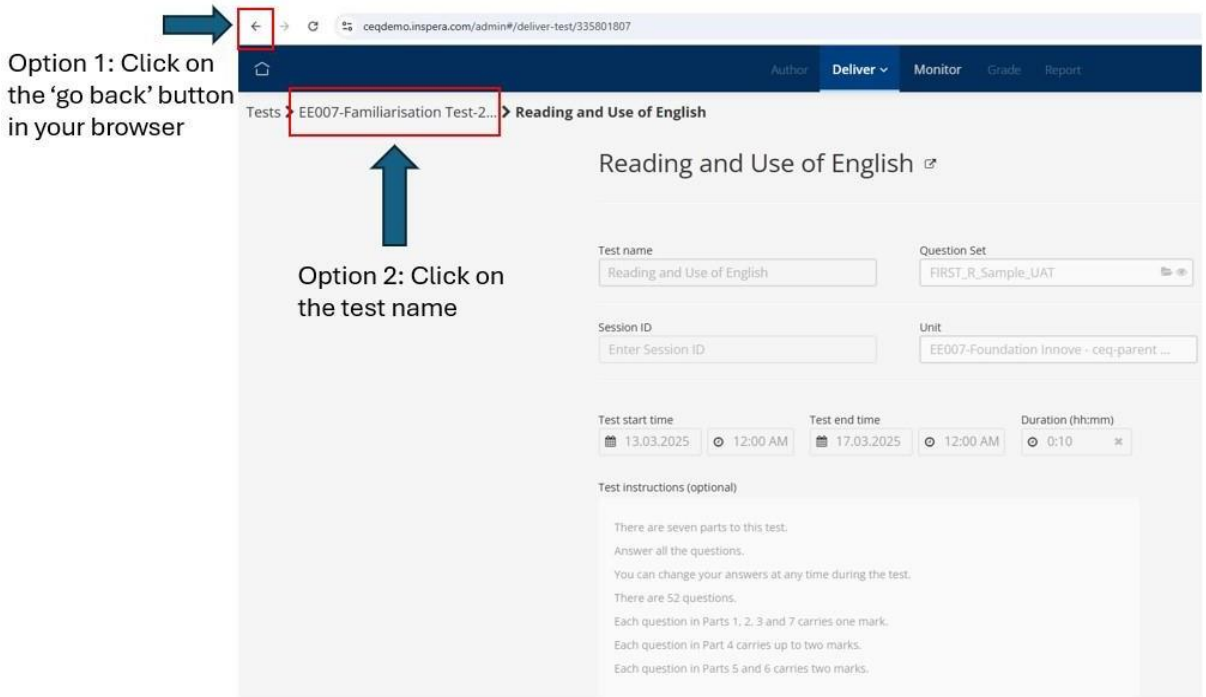

Tip: If you need any additional time in a component during this training test, you can use the incident extra time option to extend the duration of the component.

Activity 14: Once the first component time ends, Invigilators should check the candidate(s) status has moved to submitted, under the progress column.

You can now close the monitor tab.

There are 2 ways to navigate back to the parent test from the child test, you have 2 options (as shown below):

Invigilators should now go back to the parent test and get ready for the next component.

Activities during Writing child test

Activity 15: Candidates can start the Writing component.

Activity 16: Invigilators should start monitoring the Writing test.

Open the child test monitoring page by clicking on 'View All' under the Writing child test.

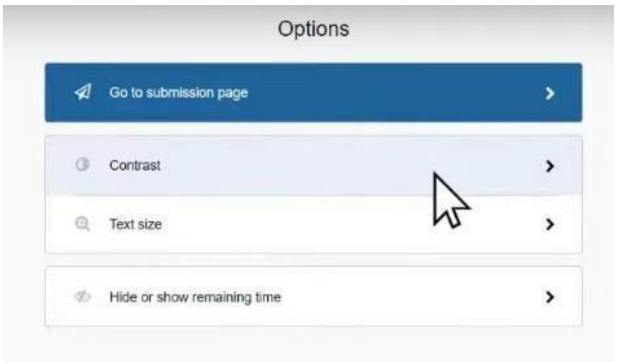

Activity 17: Candidates practise the following task on Inspera Integrity Browser:

- Hiding your screen

1. Select the hamburger menu option

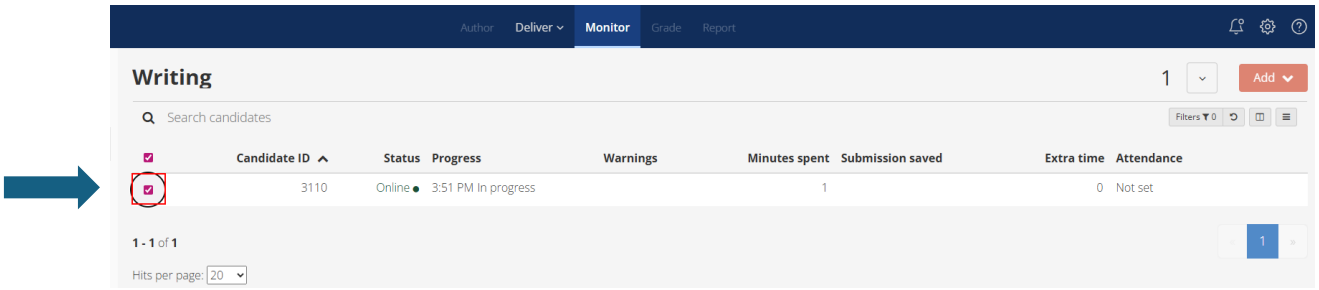

2. The menu options will appear, and the test will now be hidden

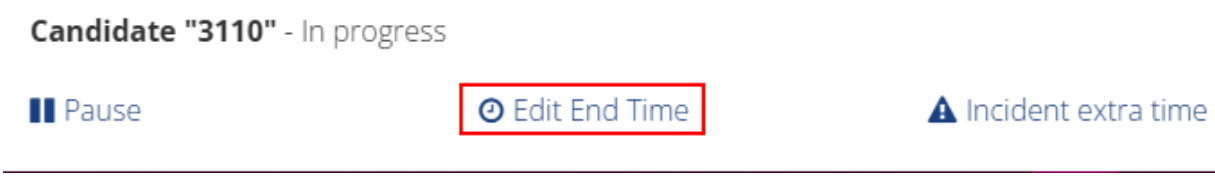

Context: Candidates who need an unplanned break should hide their screen before leaving the room. Since there is no 'hide' functionality, they can click the menu button to hide the content of their screen.

Activity 18: Invigilators should end the Writing test early and observe what happens on the candidate's computer.

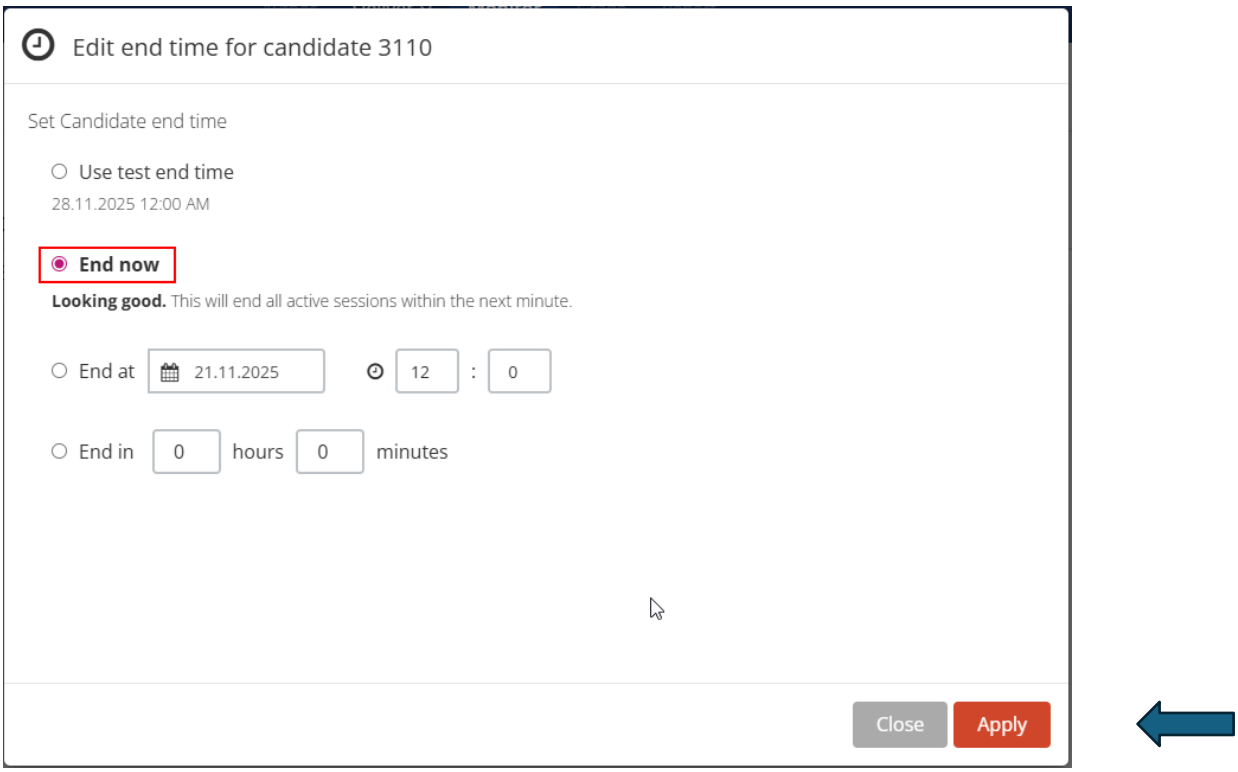

1. Select the candidate(s)

2. A pop-up bar will appear, select Edit End Time

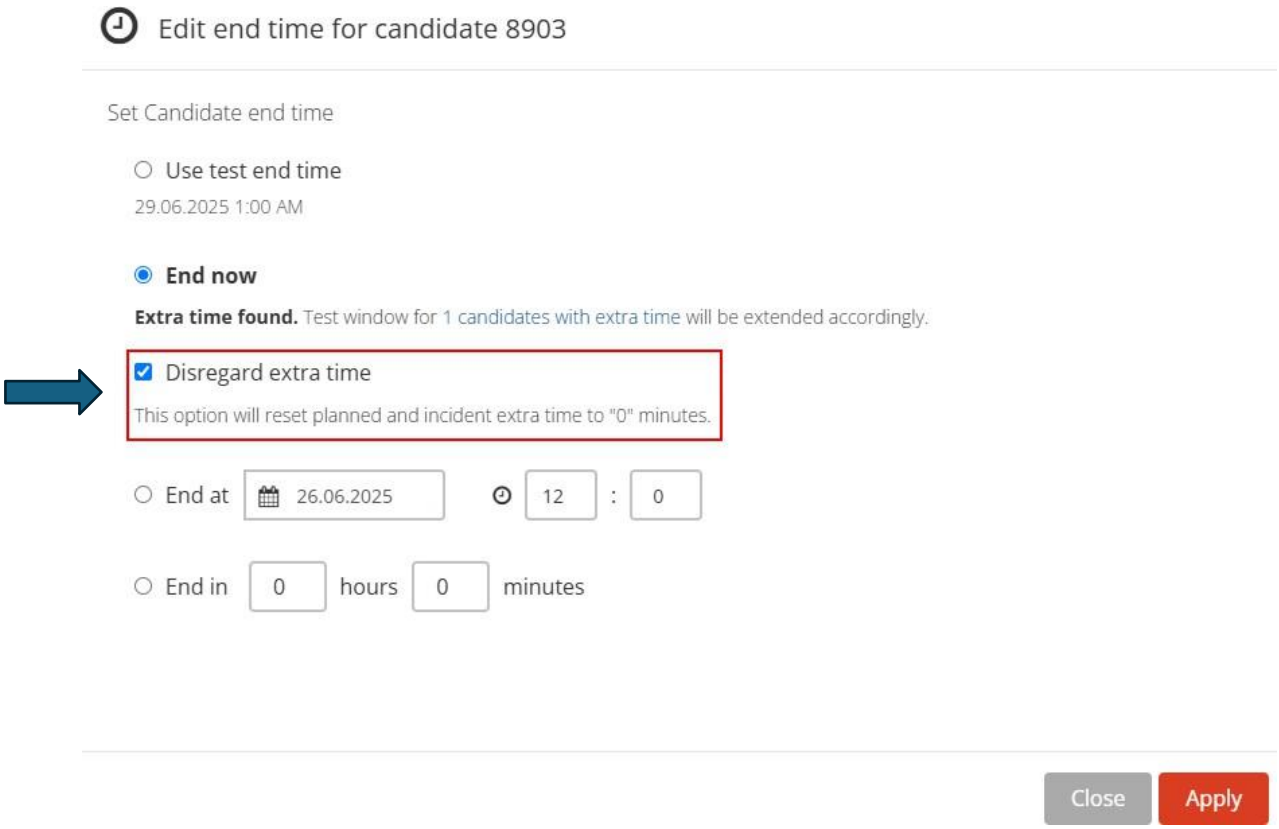

3. Another pop-up will appear, select End now and click Apply

Note: for candidates with Extra Time (either planned or incident), when you select 'End Now'

a second option will appear called 'Disregard extra time'. This option will need to be selected before then clicking the apply button.

Tip: Be patient, this action can take a few minutes to reach the candidates computer and for the component to end.

Context: During the live test, there might be occasions where candidates complete their component well before the timer runs out. This functionality allows you to end the component early if needed. Please note that once you end the component, this cannot be reverted.

Activities during Listening child test

Activity 19: Candidates can start the Listening component and practice the following:

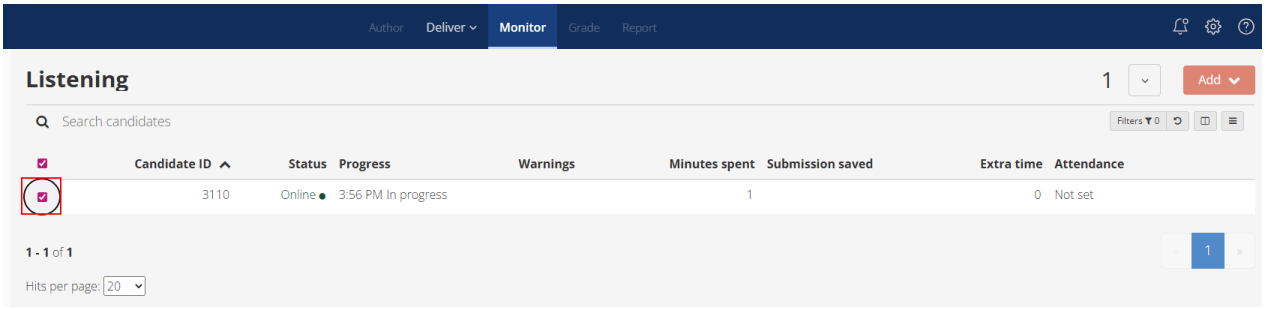

- Changing volume.
- Changing headsets.

Activity 20: As the invigilator, start monitoring your candidate at child test level and practice the following:

- Rewinding the audio 1 minute. Check the candidate's computer to confirm the audio has rewound.

Whenever you need to rewind the Listening test due to an incident, note that it is a two-step process. You must rewind the audio and add the incident extra time individually.

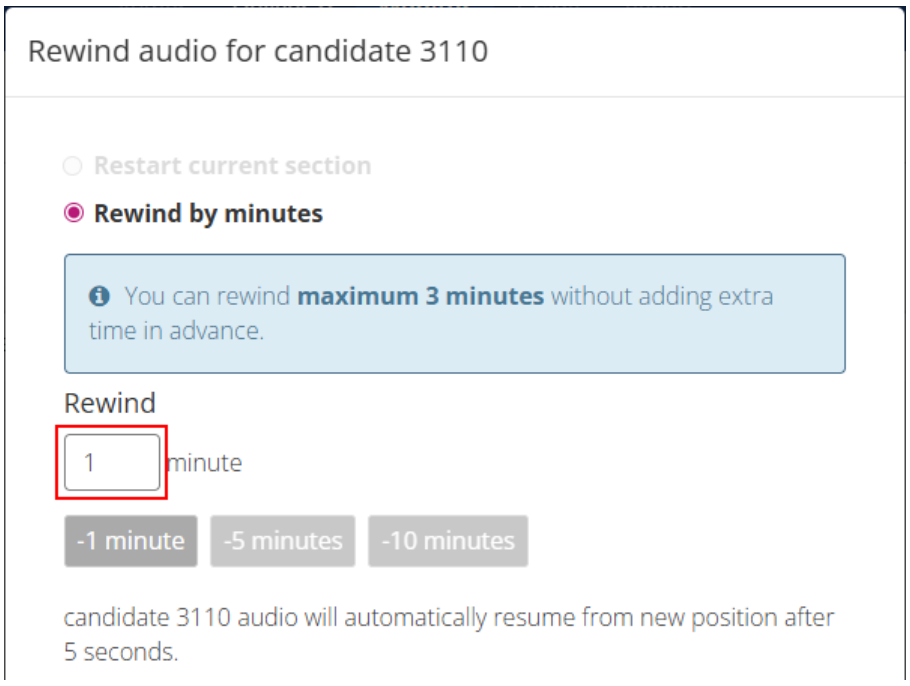

1. Select the candidate(s)

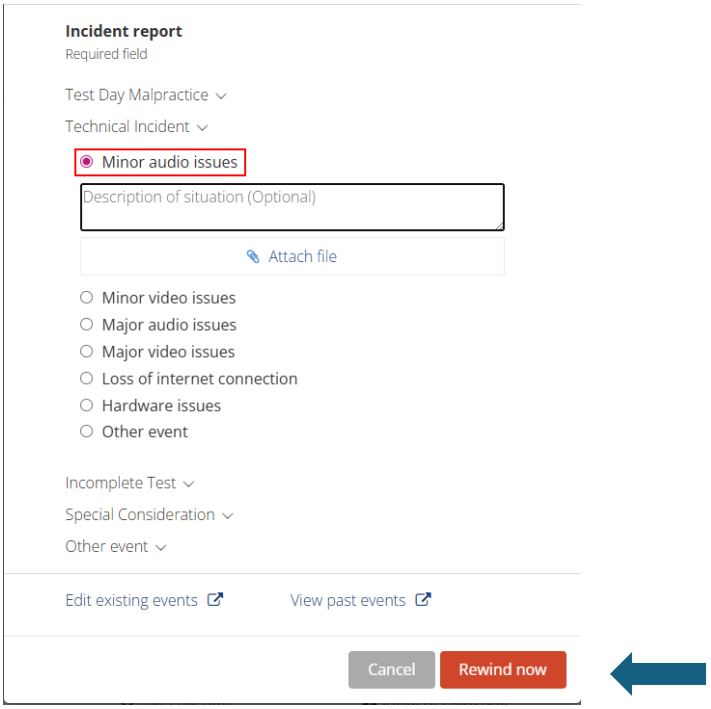

2. A pop-up bar will appear, select Rewind audio

3. Select rewind by minuets and enter the time

4. Select the incident reason add details if required and click Rewind now

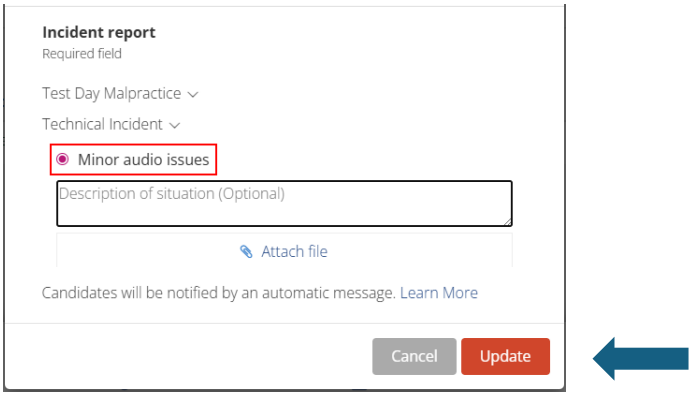

5. A confirmation will be displayed in the admin portal and on the candidates computer.

6. Now select the candidate again and this time choose incident extra time

7. Select the same reasoning and click update

Rewinding the Listening test is only possible if:

- Candidate has started the Listening test (child level).
- The candidate is not paused.
- Listening test End Time has not been reached (child level).

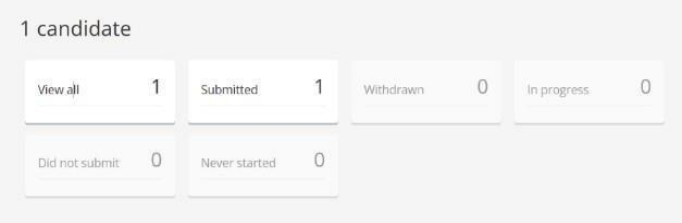

Tip: You can only rewind the audio for the number of minutes it has been playing. For instance, if the audio has been on for 3 minutes, that is the maximum number of minutes you can rewind.

Context: On a live test there might be situations where Invigilators will need to use this functionality, for example, the candidate is reporting issues with their headsets after the audio has started.

Tip: Don't forget to include additional time for processing the actions.

Section 3: Activities to complete at the end of the test

Activity 21: Once the Listening component ends, the test will be over. You can now check the summary of candidate status: In progress, submitted, never started, etc.

Context: On a live test day, all candidates who started the test should show as Submitted on all components at the end of the test. If you notice that one or more candidates are not showing as submitted, please call our test day number
+ 44 (0) 1223 803 786.

Cambridge Digital

English Qualifications

Congratulations!

You have now completed your training test. We wish you the best in your next live test.

The Application Support Team

Annex I Inspera Invigilator Training Test FAQ's

We have put together a few common questions and scenarios which could be encountered during your training test.

Who can take this training test?

The Invigilator Training Test is designed for anyone who would like to learn about Inspera Admin Portal and its key functionalities used during a live test.

Can I train multiple team members using the same invigilator role?

Yes. While you can only request access for one invigilator role at a time, you can train multiple team members simultaneously. You will need to select multiple candidates when setting up the training test. This allows each person to practice both the invigilator and dummy candidate roles by rotating after each component. You can also submit the form as many times as needed.

What is the recommended way to proceed with the test?

We recommend setting up all devices in the same room. This allows your team to practice both the invigilator and dummy candidate roles by rotating after each test component. It is a practical way to ensure everyone becomes familiar with both perspectives.

What do we do if we would like and additional admin user, without having to have an additional session?

There will be one admin user only created per session requested, this will mean that only one person can log into the admin portal at a time when completing the training.

Is there any chance an application will be rejected?

No, the application form will not allow you to select a date which is not available, which means in all instances the application should be approved.

Why was my training session scheduled for a different date to the one I selected?

If you have chosen today's date, the system will automatically create the session for two days' time to allow the session time to set up correctly and to avoid your application being rejected.

How do I add additional candidates to my session without submitting a new application?

You cannot add any additional candidates to a session you have already requested. If you need another session with more candidates, then we advise you to please submit a new request.

When can I take the invigilator training test?

You will be able to start the test from the date you have selected, the session window will be open from midnight for three days. Meaning you can run the test on the day or the following two days to the date you have chosen.

Who do I contact if I am having issues during the invigilator training test?

Please use all the guidance provided to you in the getting started email and in this document. If, however you are still having difficulties, please do reach out to Application Support by responding to your registration email.

Why can't I login?

Check you are using the right links and login details. These will be provided in the setting up guidance, these will not be your usual My Cambridge login details. Please try to use the forgotten password option to reset your password.

Is the training test used to check the computer for a live exam?

This test has not been created to check the system and the setup of your computers, the systems and installations used are all for training purposes and should not be used for live examinations.

How many times can I complete the training?
As many times as you like, the candidates can only be used once so once they have completed the test you will need to submit a request for an additional session.

Cambridge Digital

English Qualifications

Glossary of Terms

- **Parent level:** this is the session level e.g. Advanced Digital. At the parent level you can print your candidate login details or find your invigilator password.
- **Child level:** this is the component level of the test, e.g. Reading, Writing or Listening. All actions when monitoring candidates must to be completed at this level.
- **Test event:** this is also known as your session e.g. Advanced Digital_CAM 10/06/2025
- **Test URL:** the link to the test event in the admin portal. This is handy to send when raising support tickets to AST.
- **ARID number:** this is the 9 digit number of the session which can be found at the end of the URL in the admin portal. This is really useful when raising a support query with AST.
- **Incident extra time:** this extra time can be added encase of any issues during the test. This should not be used for Special Arrangement purposes.
- **ATC:** Automatic Test Construction, this refers to the setting up of the test
- **Contingency:** this is an internal process which happens sometimes upon test creation. Ignore it, you do not need to worry about this, it is for internal use only.
- **Speaking:** Is not completed in Inspera, and therefore no actions/monitoring is require at this level.
- **Status:** This is thestatus of your test, your test status will change to active upon the test day. Candidates can only sit the test in the active status.
- **Unit:** Is your centre number, this is only really applicable if an invigilator is linked to more than one centre under the same account.
- **Columns:** 
- **Views:**
